DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04 June 2007 has been entered.

Allowable Subject Matter

Claims 7-12, 14, and 15 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to Claim 7, the prior art of record teaches many of the elements of the claimed invention, including a control grid of an electron tube, comprising: a first ring of first bars fixed to a central hub, the first bars evenly spaced out on a skewed surface and substantially extended as circle pseudo-involutes about the central hub so as to form the first ring.

However, prior art fails to teach or fairly suggest the electron tube wherein any pair of two points on adjacent first bars, the pair of two points defined by crossing points of a line perpendicular to the first bars, are equidistant, in the manner required by Claim 7.

Art Unit: 2882

With respect to Claim 14, the prior art of record teaches many of the elements of the claimed invention, including a control grid comprising first bars extended substantially as circle pseudo-involutes about a central hub.

However, the prior art fails to teach or fairly suggest a control grid wherein the grid further comprises a second bar substantially concentric with the central hub and fixed to the periphery of the first ring of first bars, as well as a second ring of first bars extending from the second bar, in the manner required by claim 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

U.S. Patents to True (US 4,593,230 and US 4,737,680) teach a control grid of an electron tube, comprising: a first ring of first bars fixed to a central hub, the first bars evenly spaced out on a skewed surface and substantially extended as circle pseudo-involutes about the central hub so as to form the first ring, but do not specifically teach that any pair of two points on adjacent first bars, the pair of two points defined by crossing points of a line perpendicular to the first bars, are equidistant.
